High track advantage

Reinforced track frame

- The track frame reinforced with additional plate gives customers the confidence to travel in rough conditions
- Strong under cover to protect major components from any obstacles like wood trunks, rocks, etc.
- Reinforced track-frame to prevent any possible deformation while working in tough area

Higher ground clearance

The extra ground clearance allows the crawler excavator to move over tree-trunks and travel on un-paved roads.

Strong traction system with reinforced upper rollers

The reinforced upper rollers make our traveling system even more durable. The result: longer traveling time and distance, especially in harsher environments.

In addition, the 18-ton class travel device on the DX160LC-5, and the reinforced breaking performance on the DX180LC-5, provide more traction force for pulling heavy objects or piled logs.
